CALIFORNIA TAN<sup>®</sup>

# California Tan® Lifestyle

The Sexy Side of Science inspired by the carefree, sun-kissed lifestyle of the golden state, California Tan® tanning lotions let you live reminiscent of the beaches and playgrounds of the rich, chic and famous.

## 3-Step Tanning System

Infused with superior tanning and skin care ingredients, California Tan®'s scientifically proven, ultra hydrating formulas are available in a professional 3-step system. This system is designed to support continuous dark color development, ensuring optimal results.

### Step 1: Produce

Scientifically formulated to produce melanin in the skin resulting in a rich, golden-brown base tan. California Tan® Step 1 ingredient Vitatan® provides skin with the vital nutrients and energy it needs to produce the maximum amount of melanin.

### Step 2: Oxidize

California Tan® Step 2 products offer your skin a combination of two technologies: CuO<sub>2</sub>™ and TRF™. These technologies are rich in copper peptides and oxygen to promote oxygen intake while oxidizing the melanin you have built to optimize darker color results.

### Step 3: Extend

Specially formulated to extend the life of your tan. Infuse your skin with intense hydrating ingredients including CT-Protect™ and Vitatan®, to drench your color in nutrients that extend, enhance and complete your look.

# California Tan® Lotion Categories

## Intensifiers:

Intensifiers naturally promote dark, bronze color through hydration and skin conditioning properties that enhance the skin's natural color potential.

**Who they're for:**

Tanners of all levels and tanning experience looking to unlock their skin's true deep, dark color potential...in short, everyone.

## Rapid Rouge™

### **Rapid Rouge™/Beach Blush/Blushing Products**

In 2010, the California Tan® & Emerald Bay® brands introduced to the industry an innovation in BLUSHING tanning technology: Rapid Rouge™/Beach Blush, utilize a proprietary blend of ingredients that ensure rapid results to provide immediate, tingle-free instant color. The ingredient technology used in the Rapid Rouge™/Beach Blush formulas allow the skin to develop a slight blush color and increases oxygen levels in the skin during the tanning process, causing faster color development without the skin irritant side effects associated with traditional “tingle” or “hot action” products. This non-irritating blend produces products that are perfect for any tanner at any stage of color development and are acceptable for application on the face.

**Who they're for:** Rapid Rouge™/Beach Blush is ideal for all tanners regardless of their tanning level who want the results of a traditional tingle product without the skin inflammation and irritation.

**What they do:** Rapid Rouge™/Beach Blush blends ensure rapid results that provide immediate tingle-free instant color. The ingredients in each complex react synergistically for an immediate photo-reactive blushed glow devoid of warming the skin.

**How they should be used:** Apply evenly using circular motions immediately prior to tanning. Suitable for all skin types. For external use only. Avoid contact with eyes. Wash or wipe hands after application.

## Hot Action and H.E.A.T.™ Technologies

### **What is H.E.A.T.™?**

H.E.A.T.™- Haute Enhanced Action Technology: Advanced sensory technology that gives intense hot action with Benzyl Nicotinate and two secret ingredients including a powerful botanical ingredient. H.E.A.T.™ increases the bioavailability of the minerals and trace elements within the lotion and provides a burst of essential tanning energy with enhanced oxygenation of the skin.

**WHO they're for:** Hot Action products are for advanced tanners who like to experience a warming sensation during tanning and see a reddening effect on their skin after tanning. These products are not recommended for sensitive skin tanners. Hot Action products are available in a range of intensity -- first time users should start with lower intensity products and slowly work their way up to a level they are comfortable using.

**WHAT they do:** Products with Hot Action stimulate and increase micro-circulation of the skin for greater, more intense tanning results.

**HOW they should be used:** Hot Action products should be applied to the skin immediately prior to tanning. A spot test is recommended prior to use.

# California Tan Bronzing Technology

**Bronzer Types:** promote dark, advanced color via „Immediate Bronzers“, „natural bronzing agents“ and/or „sunless tanning agents“ called Delayed Bronzers, such as DHA and Erythrulose. Designed to optimize skin’s natural color potential while hydrating the skin.

**Natural Bronzer Lotions:** Enhance the tanning process by imparting additional color to the skin via immediate bronzers. Designed to encourage the tanning process and establish a base tan. Great for tanners looking to build a natural tan without the use of DHA or Erythrulose.

**Dual, Triple & Quadruple etc. Bronzer Lotions:** Enhance the tanning process by imparting additional color to the skin via immediate bronzers and delayed “self tanning” bronzers (DHA / Erythrulose).

**Bronzing Potency:** Designed to enhance the bronzing process, imparting additional color via immediate bronzers, delayed bronzers and melanin activating ingredients. The numbers shown on each lotion represent their bronzing potency. Each POTENCY is derived from particular melanin ingredients and bronzers as well as the amounts of each, combined to deliver intense color. Formulated to maximize color potential and “breakthrough” the color plateau for the most advanced color. Bronzing potencies are reflected in a numbered system as Duo (2) to Venti Sex (26).

**Melaboost™ (Melanin Enhancing Bronzer):** Melanin Enhancing Bronzers are the newest technology in color enhancement. These bronzers break tradition with all of the color benefits of a true sunless self tanner, based on stimulation of melanin biosynthesis. They are streak-free, stain-free and do not wash off, because the color of the skin’s tan is natural, yet at the darkest tone possible. When Melanin Enhancing Bronzers are used alone or with natural bronzers, they take longer but produce a darker more natural color.

## Ingredient System

We have simplified our way of showing you the ingredients each product has. The colors below indicate the lotion type as well as the fragrance.

 Blue = Fragrance

 Magenta = Hot Action (Tingle Effect)

 Brown = Bronzer

# Cýphêr® Collection

C ph r® is a true breakthrough in tanning technology, maximizing the skin's tanning potential by unlocking the code that triggers melanin production. C ph r® features the D-Cypher Complex™, the first tanning technology able to mimic the skin's natural functions during tanning to significantly increase melanin production. Unlock the code to dark color and beautiful bronze skin.

## Clinical tests HD Famous Face

The Extra Low Molecular Weight Hyaluronic Acid blend combines lush hydrating properties with exclusive antioxidant and anti-aging ingredients. This is the same ingredient used in Restylane®, a medical-grade injectable used to add volume & fullness to the skin to correct facial lines and wrinkles.

Independent clinical tests have shown:

- 75% improvement in skin firmness
- 66% improvement in skin texture
- 88% improvement in skin moisturization
- 84% improvement in skin dryness
